

NAME: K MADHAVA REDDY

Write a Python program which accepts a sequence of comma separated 4 digit binary numbers as its input and then check whether they are divisible by 5 or not. The numbers that are divisible by 5 are to be printed in a comma separated sequence.

Example:

0100,0011,1010,1001

Then the output should be:

1010

CODE:

```
nums=input().split(",")
res=[]
for num in nums:
    if int(num,2)%5==0:
        res.append(num)
print(",".join(res))
```

Write a Python program that accepts a sentence and calculate the number of letters and digits.

Suppose the following input is supplied to the program:

hello world! 123

Then, the output should be:

LETTERS 10

DIGITS 3

CODE:

```
s = input()
letters = 0
digits = 0
for ch in s:
    if ('a' <= ch <= 'z') or ('A' <= ch <= 'Z'):
        letters += 1
```

```
elif '0' <= ch <= '9':  
    digits += 1  
  
print("LETTERS", letters)  
print("DIGITS", digits)
```

Write a program which can compute the factorial of a given numbers. The results should be printed in a comma-separated sequence on a single line. Suppose the following input is supplied to the program: 8
Then, the output should be: 40320

CODE:

```
nums = input().split(",")  
res = []  
for num in nums:  
    n = int(num)  
    factorial = 1  
    for i in range(1, n + 1):  
        factorial *= i  
    res.append(str(factorial))  
  
print(",".join(res))
```
